Photosynthesis Research **29**: 177–178, 1991.

Contents Volume 29 1991

Volume 29 No. 1 1991

Regular papers

Sinclair, J., Spence, S.K. and Langille, L.J.: The appearance of quenching centres in photosystem II 1

Cheeseman, J.M., Clough, B.F., Carter, D.R., Lovelock, C.E., Ong Jin Eong and Sim, R.G.: The analysis of photosynthetic performance in leaves under field conditions: A case study using *Bruguiera* mangroves 11

Zipfel, W. and Owens, T.G.: Calculation of absolute photosystem I absorption cross-sections from P700 photo-oxidation kinetics 23

Wiessner, W., Deak, Zs., Mende, D. and Demeter, S.: Flash oxygen yield patterns of autotrophically and photoheterotrophically grown *Chlamydobotrys stellata* in the presence and absence of lipophilic acceptors 37

Delosme, R.: Electron transfer from cytochrome *f* to photosystem I in green algae 45

Volume 29 No. 2 1991

Personal perspective

Witt, H.T.: Functional mechanism of water splitting photosynthesis 55

Regular papers

Makino, A. and Osmond, B.: Solubilization of ribulose-1,5-bisphosphate carboxylase from the membrane fraction of pea leaves 79

Malkin, S., Schreiber, U., Jansen, M., Canaani, O., Shalgi, E. and Cahen, D.: The use of photothermal radiometry in assessing leaf photosynthesis: I. General properties and correlation of energy storage to P_{700} redox state 87

Ivanov, A.G.: Phospholipase A_2 induced effects on the structural organization and physical properties of pea chloroplast membranes 97

Hideg, È., Kobayashi, M. and Inaba, H.: The far red induced slow component of delayed light from chloroplasts is emitted from Photosystem II. *Evidence from emission spectroscopy* 107

Letter to the editor

Meunier, P.C. and Popovic, R.: Improvement of four sigma analysis for the investigation of oxygen evolution by Photosystem II 113

Volume 29 No. 3 1991

Minireview

Arnon, D.I.: Photosynthetic electron transport: Emergence of a concept, 1949-59 117

Regular papers

Margulies, M.M.: Sequence similarity between Photosystems I and II. Identification of a Photosystem I reaction center transmembrane helix that is similar to transmembrane helix IV of the D2 subunit of Photosystem II and the M subunit of the non-sulfur purple and flexible green bacteria 133

Kavelaki, K. and Ghanotakis, D.F.: Effect of the manganese complex on the binding of the extrinsic proteins (17, 23 and 33 kDa) of Photosystem II 149

Ruban, A.V. and Trach, V.V.: Heat-induced reversible changes in Photosystem 1 absorption cross-section of pea chloroplasts and sub-chloroplast preparations: *Evidence from excitation fluorescence spectra* 157

Letter to the editor

Hladík, J. and Sofrová, D.: Does the trimeric form of the Photosystem 1 reaction center of cyanobacteria *in vivo* exist? 171
